# Swiftview will revolutionise
## the way you visualise possession data

# Swiftview

**A brand new offering from industry experts D2, Swiftview will completely transform the way you interpret and apply possession data.**

This bespoke system has been meticulously designed by specialist system engineers, specifically for the rail and freight industry, to provide a safer and more efficient way to work.

The platform has been developed by users, for users. We have based our Swiftview system on the highly-valuable knowledge and experience of Super Users of the PPS system and it's outputs.

The dynamic Swiftview system takes possession data in various formats and seamlessly overlays. This means you'll see any possessions, conflicts or areas of concern in seconds - leaving you free to focus on other important things.

# Swiftview

# The key advantages of using Swiftview

### More accurate scheduling

Swiftview helps possession planners and other users to quickly determine where and when a possession is planned, providing faster and clearer visibility of the required possession information; helping users to identify possession opportunities.

### Reduced project cost

Swiftview successfully simplifies a complex, time-consuming process - giving your whole Project Team the ability to visualise Possession data.
By saving your team time across various levels of expertise, you'll also reduce project costs.
### Improved health & safety

Swiftview helps to minimise health and safety risks by clearly identifying clashes and errors that may exist within the possession system.

### Better project efficiency

Swiftview saves users time previously spent on interpreting Possession data, by creating an immediate and clear visual output - letting you work faster and smarter. Swiftview is the only platform currently available that offers an alternative way to quickly visualise possession data - whether from a Box Plan or a 2 PPS import.
# So, what does Swiftview do?

### Clearly visualises possession data

Whether for engineering works, route planning, maintenance or other projects, Swiftview provides your team with a simple, user-friendly way to visualise Box Plans and Possession data.

### Clash detection

Swiftview allows users to quickly see and react to potential possession clashes, giving you a strategic advantage and facilitating efficient diversion planning.

### Provides real time analysis

The system allows you to visualise "what if" possession data and make any necessary changes well in advance.

### Reduces admin

Using Swiftview to import Possession data, convert to Box Plans, report and edit possessions and export to your required format will enable your team to focus on other important tasks. Swiftview takes all Possession data, translating huge, highly complex spreadsheets into a range of outputs.

### Quickly searches through data

Swiftview efficiently navigates through data sets. Selecting Date and Time, Line and even down to individual Track. The unique Map View can provide pinpoint accuracy and minute levels of detail, drilling right down into individual possessions.

### Secure and efficient

Swiftview is cloud-based for maximum efficiency, enabling large volumes of users at any given time.Data security is built into the very core of the system, giving you peace of mind that Swiftview handles your data with complete integrity.
